

ABSTRACT OF THE DISCLOSURE

A system that randomly makes question and answer sentences for users to enhance their foreign language speaking and listening abilities and the method for the same. A user can use the disclosed system to complete his or her answers to the questions following hints
5 provided by the system. The disclosed method includes the steps of: establishing at least one sentence pattern sample in a sentence pattern database; outputting a question through a question-generating module; outputting the question in writing or speaking to the user through a sentence-making language-learning module; separating the corresponding answer into several separate units; shuffling the separate units to obtain a shuffled sentence; and
10 outputting the shuffled sentence to the user. After receiving spoken or written input from the user, the sentence-making language-learning module compares the answer given by the user with the answer to the question and outputs the comparison result to the user.
